DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 6, 10, 11, 13, 14, 16, 17, 20, 25, 27 - 38 are allowed. **Regarding claims 1 and 10**, the prior art of record does not disclose nor suggest the combination of wherein a system, comprising: a detector to detect a voltage stored in an ultracapacitor coupled to a load; and an extractor to extract energy from the ultracapacitor, the extractor including: a first amplifier circuit to amplify an output voltage from the ultracapacitor when the detected voltage falls below a first predetermined voltage; a divider to divide the amplified voltage to form a first control signal for the first amplifier circuit; and a controller to generate a second control signal to vary a ratio of the divider, the varied ratio adjusting the first control signal to maintain the output voltage of the ultracapacitor substantially equal to or above the first predetermined voltage the first amplifier circuit to amplify the output voltage independent of coupling the ultracapacitor to a DC power source during a charging operation of the ultracapacitor and during a time when the load is to be driven by based on the amplified output voltage, and wherein an operation is to be performed to prevent the first amplifier circuit from amplifying the output voltage of the ultracapacitor when the detected voltage is above the first predetermined voltage. **Regarding claims 2, 6, 11 and 13**, claims depend on claims 1 and 10 respectively.
2. **Regarding claims 14 and 25**, the prior art of record does not disclose or suggest the combination of wherein a method, comprising: detecting a voltage stored in an ultracapacitor coupled to a load; and extracting energy from the ultracapacitor when

the voltage falls below a predetermined value, said extracting including: amplifying an output voltage from the ultracapacitor using a first amplifier circuit, the output voltage amplified when the detected voltage falls below a first predetermined voltage dividing the amplified voltage using a divider to form a first control signal for the first amplifier circuit; and generating a second control signal to vary a ratio of the divider, the varied ratio adjusting the first control signal to maintain the output voltage of the ultracapacitor substantially equal to or above the first predetermined voltage the first amplifier circuit to amplify said output voltage independent of coupling the ultracapacitor to a DC power source during a charging operation of the ultracapacitor and during a time when the load is to be driven by based on the amplified output voltage, said method further comprising performing an operation to prevent the first amplifier circuit from amplifying the output voltage of the ultracapacitor when the detected voltage is above the first predetermined voltage. **Regarding claims 16, 17, 20, and 27 - 38**, claims are dependent upon claims 14 and 25, respectively.

Response to Arguments

3. Applicant's arguments, see Remarks, filed 10/24/08 with respect to claims 1, 10, 14 and 25 have been fully considered and are persuasive. The rejection of claims 1, 10, 14, and 25 has been withdrawn.
